Odds Ratio

High throughput phenotyping to find rare patients

- Search routine clinical records from 5 major hospitals for:
 - Demographics
 - Diagnosis
 - Medications
 - Lab Results
- Reach N
 - Rare Dx
 - Small Effects
- 10 billion FACTS
- 6 million patients

Finding rare events of interest.

Importance of real-time exploration

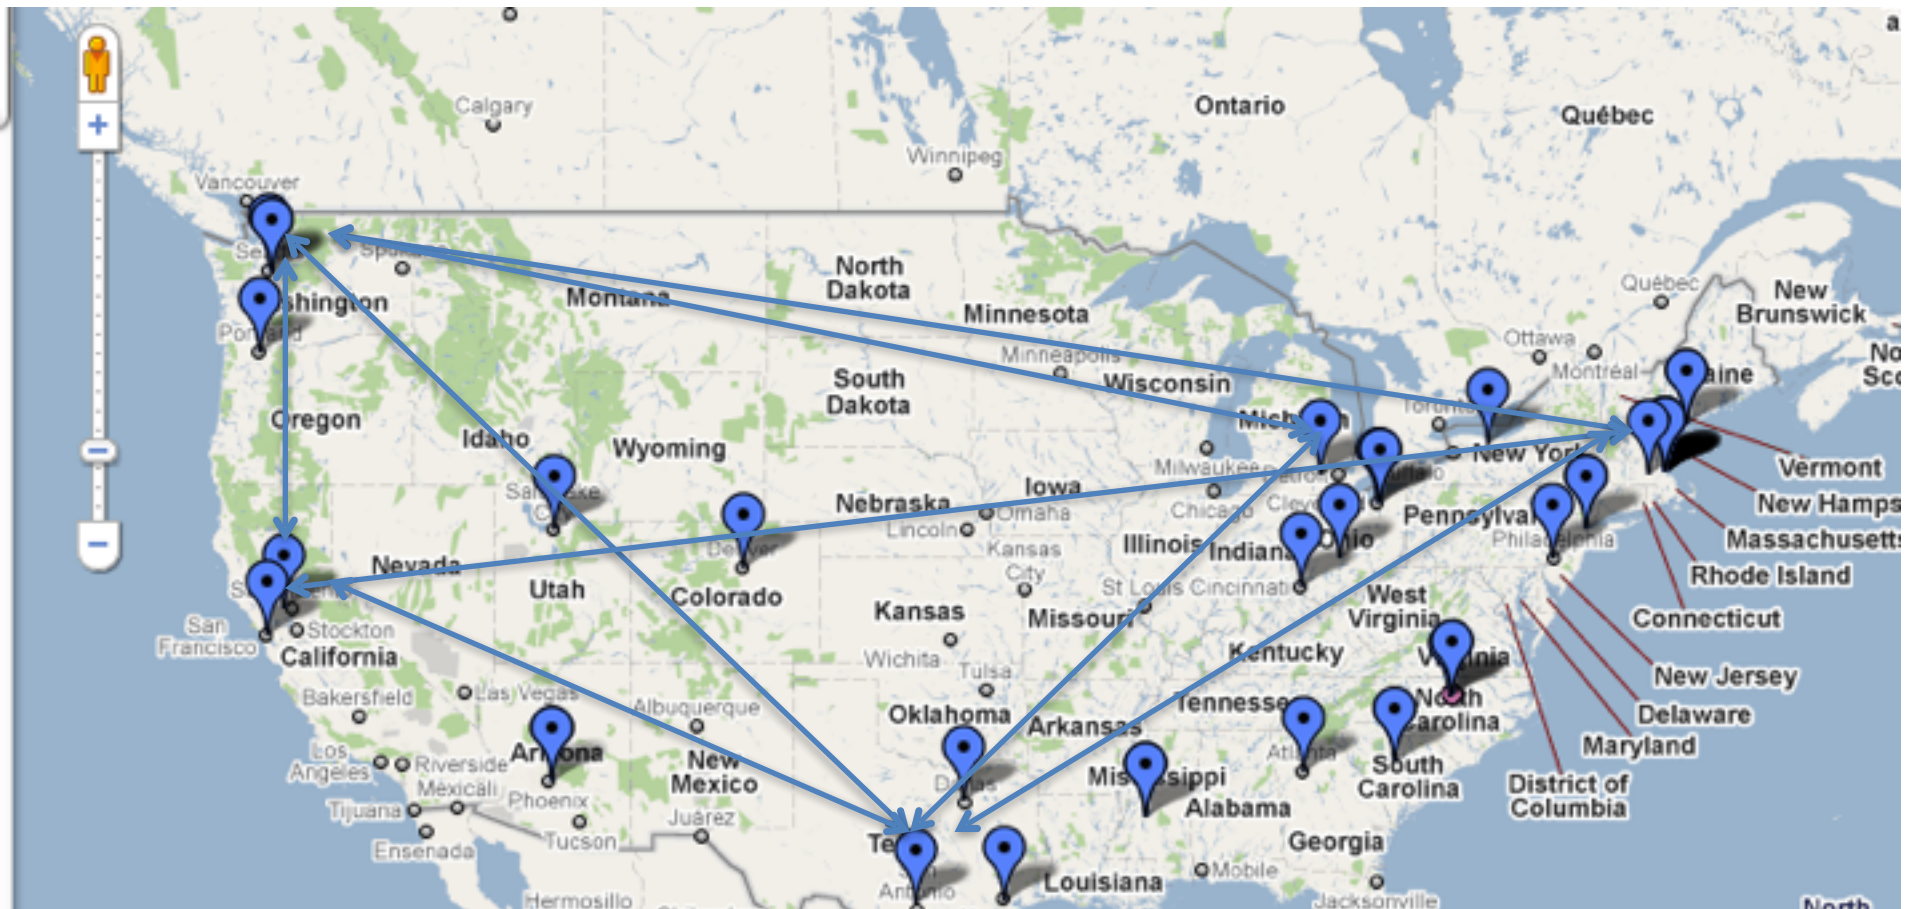

Cardiac angiogenic imbalance leads to peripartum cardiomyopathy

Ian S. Patten^{1,2*}, Sarosh Rana^{1*}, Sajid Shabul³, Glenn C. Rowe², Chulboon Jang³, Laura Liu³, Michele R. Hacker³, Julie S. Rhee³, John Mitchell⁴, Feriye Mahmood⁴, Philip Hess⁴, Caitlin Farrell⁴, Nicole Koulos⁵, Elyahu V. Khamkin⁶, Suzanne D. Burke^{1,2*}, Igor Tudorache⁶, Johann Bauersachs⁷, Federica del Monte⁸, Denise Höffker-Kleiner⁹, S. Ananth Karamanchi^{1,2} & Zoltan Arany

samples from subjects with PPCM have been previously described⁵. Patients in both studies were predominantly Caucasian. Retrospective analyses of PPCM and pre-eclampsia in the Harvard teaching hospitals were performed using the Harvard Shared Health Research Information Network (SHRINE)⁵³, a de-identified repository of aggregate patient information.

Fact Count Growth & Survival Chart (Male)

Horizontal blue curves with rectangular labels are five year fact count percentiles. Vertical red curves with hexagonal labels are three year survival curves. Data are from BWH and MGH from 7/28/2001 to 7/27/2009. All patients had at least one fact between 7/28/2005 and 7/27/2006. The “current” age is the patient age on 7/27/2006. This chart represents only male patients.

No Small Change for the Health Information Economy

Kenneth D. Mandl, M.D., M.P.H., and Isaac S. Kohane, M.D., Ph.D.

Four Propositions

- (1) **Liquidity of data.** The platform and its applications should reduce impediments to the transfer of data, in an agreed-upon form, from one system to another.
- (2) **Substitutability of applications.** The system should be sufficiently modular and interoperable so that ... just as consumers may swap out applications on their iPhones, physicians should be able to readily replace one ... system with another.
- (3) **Platform should be built to open standards** accommodating both open-source and closed-source software.
- (4) **Platform that supports diverse applications** will lead to a robust health information economy ... by allowing competition and "natural selection" for high-value, low-cost products.

Design Challenge

1 Design + 1 Developer + 1 Week

SMART on FHIR® at HIMSS 14

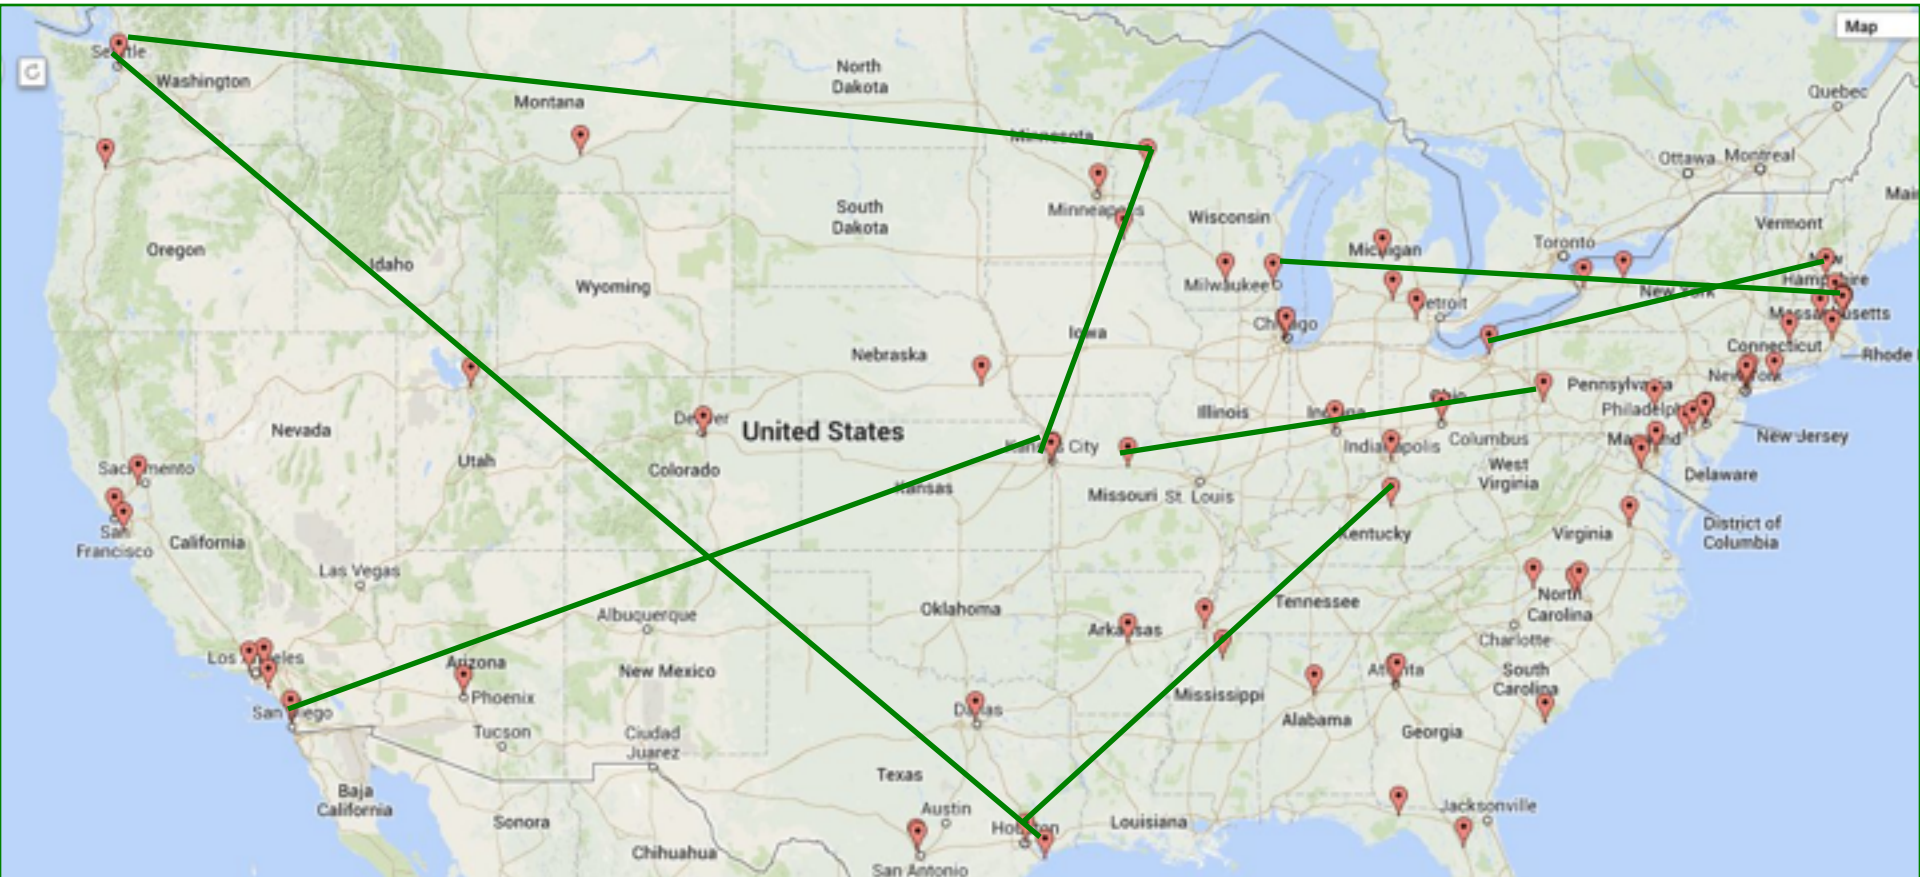

The Effect Arm Opportunity

- Clinical Trials (PCORI & CTSA)
- Direct to/from patient
- Integration with home-monitoring

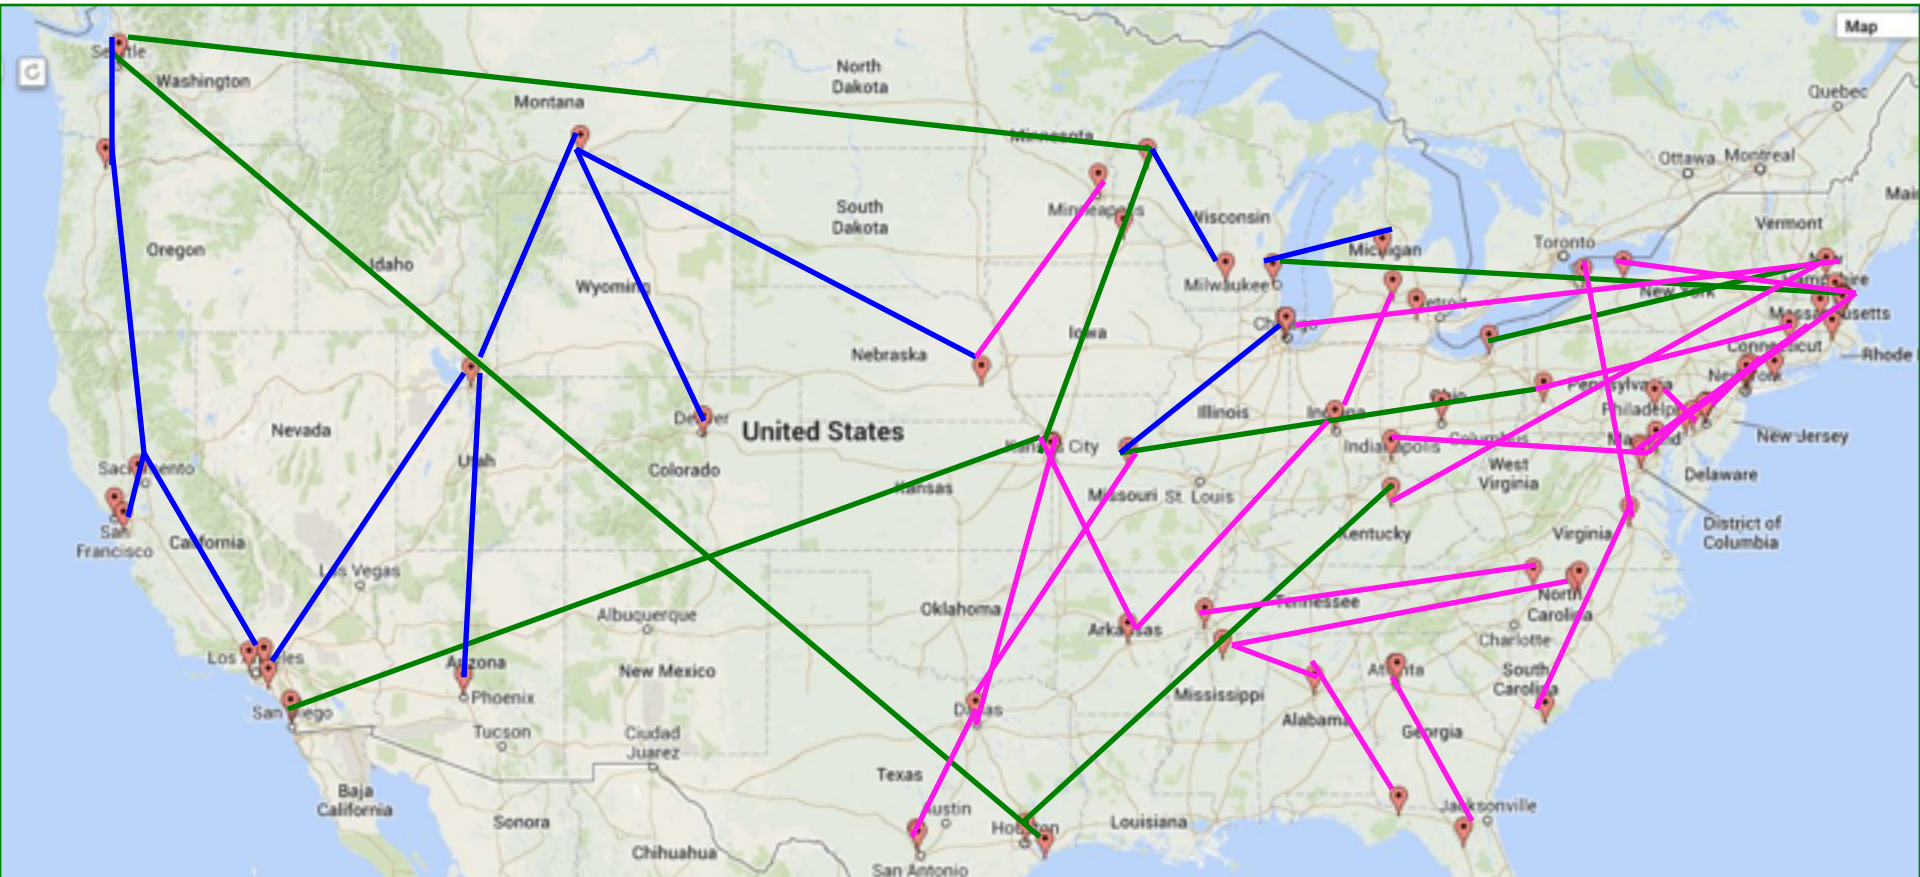

Methodological Agenda

- Biomedical relevance of data science → expansive view of what constitutes biomedical data.
- The investment in healthcare can be leveraged for data science with incremental \$.
 - Challenge: Randomization in retrospective-prospective and other *in silico* trial designs.
 - Linkage across institution and data modalities
 - Generalizing for methods of data-type dependent imputation, de-noising
